

Xing (Stella) Hu

Staff Software Engineer

👤 Profile

Staff Software Engineer with 8+ years of industry experience, specialising in platform engineering and observability for the past 3 years. Deep hands-on expertise in high-throughput telemetry pipelines, AWS infrastructure, Kubernetes, Datadog and OpenTelemetry, processing TBs of logs daily in production. Passionate about making distributed systems observable and building tooling that empowers engineering teams at scale.

🏢 WORK EXPERIENCE

Staff Engineer - Engineering Platform / Observability at SEEK

Sept 2025 — Present

- Architected and operates end-to-end telemetry pipelines processing TBs of logs daily from EKS and AWS Fargate via Vector and Kinesis, achieving high availability with platform-wide config propagation in under 5 minutes
- Leading a telemetry project to migrate the pipeline to OpenTelemetry, evaluating vendor-neutral standardisation across multi-tenant workloads
- Designed alerting system orchestration architecture; delivered tech talks on log standardisation to 100+ engineers across the organisation
- Established team operational rhythms (on-call handover, 80/20 feature-to-maintenance ratio, roadmap planning) for a growing platform team
- Conducted 10+ engineering interviews and served as coding interview track custodian

Senior Software Engineer at SEEK

Aug 2021 — Sept 2025

Technical lead for migration of 300+ services from Splunk to Datadog, enabling centralised observability and significant cost reduction

Consolidated 33 Datadog organisations into one, streamlining access control, alerting, and cross-team visibility at scale

Designed and implemented Dead Letter Queue patterns and backpressure handling for high-volume log pipelines, significantly reducing data loss risk under load spikes

Mentored engineers through informal technical support and SEEK's graduate mentoring program

TECHNICAL SKILLS

Microservices Architecture

Platform Engineering

Kubernetes

System Design

laC

Alerting Architecture

Distributed Tracing

Log Management

AWS (ECS, Kinesis, Lambda,
SQS, S3, Fargate, EKS)

Terraform

SLO/SLA Design

OpenTelemetry

Datadog

Vector

TypeScript / Node.js

Python

Golang

High-Throughput Data
Pipelines

CI/CD

Technical Leadership

Engineering Mentorship

Cross-functional
Collaboration

Hiring & Interview Design

Engineer at SEEK

Jul 2019 — Jul 2021

Implemented the core job posting service to manage advertisement content and statuses

Built new compliance service to check fraud advertisements,

Built a unified job data enriching pipeline for all APAC tenants.

Responsible for regular code review, code quality, and design patterns compliance.

Responded to and resolved internal customer requests and new feature requirements.

Associate Engineer at SEEK

Feb 2018 — Jun 2019

- Developed location suggestion feature in main SEEK app.
- Building data processing pipeline to pass resume data into frond-end services.

Junior Software Developer at KUNGFU SOFTWARE

Oct 2014 — Mar 2015

- Performed as developer to design and implement a smart robot which could perform anthropopathic operations in Wechat platform, such as chatting, weather forecasting..etc
- Used Node.JS framework to build a server website to console and monitor robot's behaviors

Tech Talks & Knowledge Sharing

Roadmap Planning

Team Culture Building

🎓 EDUCATION

Master of Engineering (Software), UNIVERSITY OF MELBOURNE, AUSTRALIA

2015 — 2017

Bachelor of Engineering (Digital Media Technology), HUNAN UNIVERSITY, CHINA

2010 — 2014

"UnitySteer" project won the "Excellent Graduate Project of University" in 2014 The leader of Baidu Technology Club of Hunan University

★ LICENSES & CERTIFICATION

CERTIFIED KUBERNETES APPLICATION DEVELOPER

May 2025 — May 2025

The Cloud Native Computing Foundation

AWS CERTIFIED SOLUTIONS ARCHITECT – ASSOCIATE

Jan 2021 — Jan 2024

Amazon Web Services (AWS)
